

VESTA™ heat exchangers

The shell and tube heat exchangers from Aalborg Industries meet a wide range of needs for customers in the marine and land-based markets. Applications range from oil preheating to heating of water and edible products. Customer requirements form the basis in the design process, resulting in custom fit solutions with off-the-shelf delivery times and prices.

One of the world's leading heater suppliers

Aalborg Industries' experience in heat exchangers dates back to 1914 when the first patent for an electric heating element was taken out. Today we develop and produce heat exchangers according to ISO 9001:2000

Aalborg Industries holds shop approvals from many leading classification societies

Close to our customers

We service our specific customer segments world-wide from our offices in Denmark and abroad. A tight network ensures quick response to changes in market requirements and customer needs.

Marine applications

Shipyards and owners rely on Aalborg Industries for the supply of reliable and thoroughly tested heat exchangers. Heaters are used for a variety of applications such as cargo heating, tank cleaning, fuel oil and lubrication oil heating and purifying. Engine cooling/preheating, fresh water heating, steam generation and dump condensing/drain cooling are other functions performed by Aalborg Industries' heat exchangers.

Land-based applications

Customers and partners in the land-based segment choose Aalborg Industries as their supplier of heat exchangers; a decision ensuring flexible and on-time delivery at the agreed price.

Flexible and cost effective

The design of all Aalborg Industries' heat exchangers focuses on customer needs. In the design Aalborg Industries takes advantage of its wide experience in the applications and its deep knowledge of the heating surface technology. This results in highly efficient and compact heat exchangers.

Research and development

Continuous research by our experienced engineers - in cooperation with our partners - uncovers new market needs and is the basis for the development and design of Aalborg Industries heat exchangers.

Sales Support

To us, service means quick, detailed and customer orientated support in the entire process from specification, delivery within weeks, to start of operation and, later, After Sales service. Aalborg Industries takes pride in the fact that most heat exchangers are still in use more than 25 years after commissioning.
